

Deaa Naser

AI Engineer & Full-Stack Developer — Founder of Siraj AI Platform

AI Engineer and Full-Stack Developer experienced in building production-grade AI applications, backend systems, and cross-platform products. Founder of Siraj, an AI-powered education platform where I designed and deployed complete systems combining LLM applications, RAG pipelines, mobile development, and cloud infrastructure. Strong problem-solving background through competitive programming (Codeforces Specialist).

 deaa.vercel.app

TECHNICAL SKILLS

- **AI Engineering:** LLM Applications, RAG Systems, AI Agents, Vector Databases
- **Backend:** Python, Django, Django REST Framework, Celery, Redis, MySQL
- **Frontend & Mobile:** React, TypeScript, React Native, Cross-platform Development
- **Infrastructure:** Docker, Linux VPS, Cloudflare, Production Deployment

EDUCATION

Information Technology

 Homs University  2020 – 2025

EXPERIENCE

Founder & Full-Stack Engineer

 Siraj  Mar 2024 – Present  Homs, Syria (Remote)

Keywords: *React, TypeScript, React Native, Django, DRF, LLMs, RAG, Docker, Cloud Infrastructure*

- Founded and built **Siraj**, an AI-powered education platform, developing the complete technology stack across **web applications, mobile applications, backend services, AI systems, and production infrastructure**.
- Developed modern web applications using **React, TypeScript, Vite, Tailwind CSS**, and **shadcn/ui**, building scalable frontend architectures with **TanStack Query, Zustand, React Hook Form**, and **Zod** for state management, data fetching, and form validation.
- Built backend services using **Python, Django**, and **Django REST Framework**, designing **REST APIs**, implementing **JWT authentication**, managing **MySQL** databases, and processing asynchronous workflows using **Celery** and **Redis**.
- Developed cross-platform mobile applications using **React Native** and **Expo**, implementing **Expo Router, NativeWind**, reusable UI components, and managing production releases through **Expo Application Services (EAS)**.
- Integrated AI capabilities using **Large Language Models (LLMs)**, **Retrieval-Augmented Generation (RAG)**, **vector databases**, and **AI workflows** to build curriculum-grounded intelligent learning features.
- Managed production infrastructure using **Docker, Linux VPS, Cloudflare**, and **Dockploy**, while implementing scalable file storage and backups using **Backblaze S3-compatible storage**.
- Independently handled the complete product lifecycle, applying strong **system design, problem-solving, and engineering decision-making** across frontend, backend, mobile, and AI domains.

SELECTED PROJECTS

Siraj AI Education Platform

 Founder Project  2024 – Present  Mobile & Web

Keywords: *Django, React, React Native, LLMs, RAG, Vector Databases*

Production AI learning ecosystem combining an AI tutor, teacher publishing tools, and student applications. Designed the complete architecture including AI retrieval systems, backend APIs, mobile applications, and infrastructure.

Klimate

 Personal Project  2026  Web Application

Keywords: *React, TypeScript, Vite, Tailwind CSS, TanStack Query*

Real-time weather application focused on responsive frontend architecture, API integration, and modern React development practices.

TECHNICAL HIGHLIGHTS

- Designed and deployed end-to-end AI systems combining LLMs, retrieval pipelines, embeddings, and vector search.
- Built production backend architectures supporting AI-heavy workloads with asynchronous processing.
- Developed applications across web and mobile platforms with shared backend infrastructure.
- Created solutions for complex technical challenges including Arabic RTL interfaces, mathematical rendering, offline synchronization, and AI reliability.

AWARDS & ACHIEVEMENTS

- **Codeforces** – Specialist rating (~1506)
- **Syrian Collegiate Programming Contest (SCPC)**
 - Participant with certificates in 2022, 2023, 2024, and 2025.
 - Competitive programming practice through Codeforces and LeetCode.
